.venv (Python 3.12.10)

```
# ----- 2 CHECK LINEARITY -----
plt.figure(figsize=(6, 5))
plt.scatter(y_test, y_pred, color='blue')
plt.plot([-2, 3], [-2, 3], color='orange', linestyle='--') # 45 degree perfect line
plt.title("Actual vs Predicted (Linearity Check)")
plt.xlabel("Actual")
plt.ylabel("Predicted")
plt.show()
```

[10] ✓ 0.1s Python

The scatter plot displays predicted values on the y-axis (ranging from -2 to 3) against actual values on the x-axis (ranging from -2 to 5). A dashed orange line represents the 45-degree perfect line where predicted equals actual. Blue data points are scattered around this line, indicating the model's performance in predicting actual values.
